

MILESTONE B1 — FEEDBACK

Angus Jullian G. Alcantara

Case P6 — Workforce

Your mark: **83** /100

Proficient, and approaching exemplary on reasoning.

How the mark is made up

Criterion	Score	Weight
Technical correctness	3 / 4	35%
Business justification	3.5 / 4	25%
Documentation and readability	3 / 4	20%
Response to prior feedback	4 / 4	15%
Timeliness and integrity	4 / 4	5%

Scores are on the rubric's 4-point scale. Response to Prior Feedback carries full credit on B1, since there is no prior feedback yet — it becomes live from B2.

What you did well

This is the most complete submission in the class. Every one of the seven files is accounted for with format, size, owner and update frequency, and every defect you reported carries an accurate row count — 14, 22, 11, 16, 25, 5. I checked each against the source. They are right.

The “thought process” column was not asked for, and it is the best thing in your document. It shows you reasoning as a manager rather than as a student completing a table. Your third question — whether the item earning the most per unit is also the one earning the most overall — is the sharpest business question anyone submitted. That distinction between margin and volume is what separates an analyst from a report generator, and you arrived at it unprompted.

Your AI Use Log is the model for the class, and I intend to show it to them. Four entries, each specific about purpose and verification. The one that matters is where you noted ChatGPT could not know the file contents and you overrode its answer on update frequency because you know how HR actually works. That is exactly the accountability the policy is built around: the tool proposes, you decide, and you can say why.

Part by part

Part A — Complete and accurate. The weakness is in the grain statements: you described what columns each file contains rather than what one row represents. “One row represents the Customer's ID, Name, Email, Tier, City and date Joined” is a column list. The grain sentence should read “one row represents one enrolled loyalty customer.” Short, and about the thing rather than its attributes.

Part B — Strong. Four functional areas covered, and you correctly identified a question the data cannot answer — customer feedback — and named the data you would need. That was asked for and only you did it cleanly.

Part C — Nine defects, all correctly counted. But look at where they came from: customers, employees and inventory. You reported nothing from sales_transactions except the blank Customer IDs — and that file holds six defects, including duplicated rows and amounts that do not equal quantity times price. It is the largest file and the one your whole warehouse will be built on.

Part D — A real verdict. You named what you would refuse to publish and why, and you answered the question about the branch manager directly. That is the right instinct.

Where to push next

- Write grain as a sentence about the row, not a list of columns. This becomes a pass-or-fail gate in Week 6.
- Go into the biggest file first. Sales is where the money is and where most defects hide.
- One find to revisit: you spotted six customer emails written in uppercase. Look at those six rows again beside the rest of the file — you found the fingerprint of something larger without naming it. See if you can work out what it is before Saturday.

Something worth saying plainly. In the Week 1 diagnostic you gave yourself the lowest self-rating in this class — close to zero across every area — and you then produced the highest score in the class. You have now also produced the most complete B1. That is twice in two weeks that your own estimate of your ability has been well below what you actually do.

I am not telling you to be overconfident. I am telling you that your caution is currently costing you nothing in results and might eventually cost you opportunities — the analyst who says nothing in a meeting because they assume the room knows better is a common and expensive mistake.

You are doing this well. Take the next milestone with more nerve.

— Sir Jerald

Questions about any of this? Message me, or bring it to consultation. I would rather explain a mark than have you guess at it.
