

MILESTONE B1 — FEEDBACK

Lawrence Lagdamen

Case P7 — Operations

Your mark: **81** /100

Proficient. The strongest analysis in the class inside the thinnest report.

How the mark is made up

Criterion	Score	Weight
Technical correctness	3.5 / 4	35%
Business justification	3 / 4	25%
Documentation and readability	2.5 / 4	20%
Response to prior feedback	4 / 4	15%
Timeliness and integrity	3 / 4	5%

Scores are on the rubric's 4-point scale. Response to Prior Feedback carries full credit on B1, since there is no prior feedback yet — it becomes live from B2.

What you did well

You found more than anyone else in this class, including the three hardest defects in the entire dataset. Product P99 sold but missing from the product file. Nine dates absent from the calendar. And amounts that do not equal quantity times unit price — which no profiling tool will ever show you, because every one of those values is a perfectly well-formed number. The only way to find it is to recompute the column yourself and compare. You did that.

You also connected two defects that are related and that nobody else linked: transactions with zero quantity but positive revenue are part of why the amount column does not reconcile. Noticing that one fault explains another is analysis, not checking.

Your grain statements are the best in the class, and I am going to project them on Saturday as the example. “One row represents one inventory movement for a product at a branch on a specific date.” That is exactly the form. Everyone else listed columns; you described the row.

Your first business question asks about revenue since each branch's opening date. That means you noticed the branches did not all open at the same time, which makes a raw comparison unfair. Nobody else caught that.

Part by part

Part A — The grain statements are excellent. But the table is missing four things the brief required — format, row and column counts, business owner, and update frequency. Those are quick to supply and their absence cost you more marks than the analysis did.

Part B — Good questions, and the opening-date insight is genuinely sharp. Two gaps: no profitability question, and you did not name which files each question needs. Profitability is one of the four areas the brief specified.

Part C — The richest content in the class — and almost no numbers. You wrote that the sales data contains 23 duplicate SaleIDs, which is correct and precise. Then for everything else: “some customers have no email,” “inconsistent BranchID formats,” “some unusually large inventory deliveries.” All true. None counted. “How many rows are affected” was an explicit requirement, and it is the difference between a finding a manager can act on and an impression they have to verify themselves.

Part D — Sound reasoning about what would need to happen before you would present. It also stops mid-word — “present my analys”. Read the document once before submitting; that one is free.

Where to push next

- Count everything you find. Filter the column, read the row count at the bottom, write it down. Two extra minutes per defect.
- Fill in every field the brief asks for, even the boring ones. Your analysis was 3.5 work reported at 2.5.
- Add a profitability question to your thinking — it is your weakest diagnostic area and avoiding it will not make it easier.
- Read your own document once before uploading.

On the AI Use Log

Your log is present, which puts you ahead of half the class. Two improvements: fill in the Tier column, and write one entry per distinct use rather than one for the whole milestone. The log is meant to be a record you could defend line by line if asked.

You are the best analyst in this class and your mark does not say so. That gap is entirely about reporting, not about thinking — and reporting is the easier of the two to fix. I can teach anyone to count rows and fill in a table. I cannot easily teach someone to notice that zero-quantity sales explain a broken revenue column.

Fix the mechanical half and your marks will move sharply, because the difficult half is already there.

I also know you are carrying more outside this course than most students are. The work you submitted does not read like someone doing the minimum. Keep going.

— Sir Jerald

Questions about any of this? Message me, or bring it to consultation. I would rather explain a mark than have you guess at it.
