

LYCEUM OF THE PHILIPPINES LAGUNA

COLLEGE OF BUSINESS AND ACCOUNTANCY
SECOND SUMMATIVE ASSESSMENT
First Term SY 2026-2027

FM-LPU-L-ACAD-07
Revision: 00
Effective: JAN 2, 2020

BDAT04 (Fundamentals of Data Warehousing)

Course Intended Learning Outcome(s)

This assessment intends to measure attainment of the following:

CILO 2. Profile, clean, transform and combine business data from multiple sources using Power Query, documenting every transformation step so that the result is auditable and repeatable.

CILO 3. Design and build a dimensional model — declaring the grain, specifying fact and dimension tables, keys and relationships — and validate it in Power BI.

CILO	Assessed through	Points
CILO 2, 3	TEST I — Written Examination (situational essays, Questions 1–3, with AI-polish and prompt log)	50
CILO 3	TEST II — Practical Demonstration (four drawn tasks, Bands A–D, on an unseen dataset)	45
CILO 2, 3	TEST III — Oral Interpretation of the Model	5
CILO 3	TEST IV — Bonus Challenge (dimensional modeling vocabulary)	+3

Assessment Type:

Two-part summative examination administered in one session, covering Weeks 1 to 6:

- TEST I — written situational essay (50 points, 90 minutes)
- TEST II — hands-on practical demonstration of dimensional design in Power Query on an unseen dataset carrying three fact tables, four tasks drawn by lot (45 points, 120 minutes)
- TEST III — individual oral interpretation of the student's own B3 model: grain, relationship sides, and the business meaning of one number (5 points)
- TEST IV — oral bonus challenge on dimensional modeling vocabulary (up to +3 points, non-deductive). Total: 100 points, plus bonus.

LYCEUM OF THE PHILIPPINES LAGUNA

Assessment Procedure:

- 1. Setup (10 minutes) — the examination notebook is released through the LMS on a timer; students download the .ipynb and open it in Google Colab, and draw their four practical tasks by lot.
- 2. TEST I (90 minutes) — three situational essays answered in the examination notebook; the in-room draft is collected and carries the substance marks.
- 3. Break (15 minutes).
- 4. TEST II (120 minutes) — the dataset links are released at the start of this part and not before. Each examinee performs the four drawn tasks in Power Query on an unseen, instructor-prepared dataset carrying three fact tables at three grains. Every task ends with a counted result and a one-sentence written decision. A TMDL export of the model is taken in the last ten minutes and uploaded with the task sheets to the student’s assessment folder.
- 5. TEST III (about 5 minutes per examinee) — the student interprets their own B3 model without notes: the grain of one fact table, the sides of one relationship, and what one number means for the business; one bonus card on modeling vocabulary is drawn afterward (TEST IV).
- 6. Post-examination — the AI-polished essay version and the verbatim prompt log with shared conversation link are submitted by Sunday, 4 October 2026, 11:59 PM.

Conditions: open notes for TEST I and TEST II, including the syllabus, the three advance reading packets, feedback letters, laboratory and activity sheets and the student’s own model; TEST III is closed-book. NO artificial-intelligence tools of any kind during the examination.

LPU – Laguna student handbook section 7.3.10 states that, "cheating in any form during an examination, written reports, case analysis, experiments and practical demonstrations, or any form of assessment is considered a SERIOUS OFFENSE", and is subject to existing sanctions stated in section 7.4.

Assessment Tool:

Rubric B (analytic rubric), re-weighted for this term and applied through: (1) a four-level scoring sheet per student — Beginning · Developing · Proficient · Exemplary; points = level ÷ 4 × weight (TEST I 50 · TEST II 45 · TEST III 5; total 100) · (2) the criteria for Rubric B as re-weighted — data preparation 15, grain and dimensional design 45, relationships and model validation 35, interpretation 5. The syllabus allocates 25 to DAX measures; DAX is Week 8 content and the midterm falls in Week 7, so that weight is redistributed to grain and dimensional design and to relationships, and DAX is deferred to the final assessment. This deviation is recorded in the syllabus amendment memo · (3) the instructor’s answer key and observation checklists for the twelve banded practical tasks · (4) bonus cards scored +3 / +2 / +1 / 0, add-only.
